JM

Hi Derek,

Apologies in the delay getting back to you!

Attached is a PDF of an image angle reference sheet that I have begun working on. The first 8 reference shots can get us started for all products — If you could please set those angles up in the hopper to come out for every product, that would be incredible. 😊

I will add to this document over time and reshare to include additional optional shots that we will want to be available, but not necessarily automatically produce every time we run a model through the process.

An example of an optional additional shot for reference would be #9 — We will identify these as we get into the project a little deeper and work more to individualize products as needed to ensure we can show various lights on/off, specific parts/features we want to emphasize, etc.

If you have any questions, please feel free to reach out!

Have a great weekend, everyone! 😊

Subject: VNTANA x Taco 3D work underway + a couple of quick questions

Hi Ken & Team,

Quick update: we met with the 3D team yesterday and today, and production has begun. I'll share status as we have it. In the meantime, here's what we're working from, attached is a simple overview of the first SKU set (32 assets across 12 families) plus the shared materials library.

Two questions as they get going, and I'm happy to jump on a quick call if that's easier:

1. **Hero angle.** Each 3D asset gets one primary "hero" camera. We'd mentioned a standard 3/4 front view when we first talking, but in looking at the catalog photos they seem to use different angles product to product. So which would you prefer: a consistent 3/4 front hero on every product, or defer to each product's catalog shot (matches your photography, but the angle varies per SKU)?
2. **007e faceplate (see screenshot).** The base 007e-2F2 has a smooth cover, while the other variants (2F4, SF4, SU) have a raised knob/screw. Which is correct, smooth or screw cover / knob - or are the models correct and they have different casings?

Thanks!

Derek
